

LED light Busch-iceLight®

Function turns into emotion. By means of light from the flush-mounted box. Because **Busch-iceLight®** supports the harmonious interaction of light, architecture and function. At the same time it completely blends with the existing ABB/Busch-Jaeger switch ranges solo®, future linear®, carat® and Busch-axcent®. Thereby extending the options for creating, illuminating, providing orientation and informing. In the private, business and semi-public sectors.

Design

01

Personal ideas create a personal atmosphere. Now possible with the adjustable design covers. Because the high-quality inserts are available in 9 different grids and decors. This is how **Busch-iceLight®** individually creates a personal atmosphere. And lends light a new, many-faceted character.

01 Busch-iceLight® - Wall module Ambience

02

Light can be more than merely the illumination for the room. If it highlights what the architecture expresses. When it highlights the personal touch. Just like the **Busch-iceLight®** Ambience ceiling light. Because it provides light in its purest form. From Above. And it can be discreetly integrated. Individually in small rooms or as a series on large ceiling areas. Functional for the entrance area, corridor or stairs. Colorful for the bathroom. Wherever – the **Busch-iceLight®** radiates the essentials.

03

Whether for one's path or one's goal – orientation is necessary for both. This is especially so in a world that is getting ever more complex. And it should appeal at the very first glance. Because this enables people to move about safely on unfamiliar terrain. Especially in buildings with public traffic is clear communication important. Also as an identifying sign of high-quality architecture. And here **Busch-iceLight®** Orientation gladly takes the lead.

Applications

Ambience

The matching atmosphere in the bathroom is created by the ceiling light. The lighting can be switched on prior to or after the film as a soft basic light.

Orientation

Busch-iceLight® offers orientation in the dark. The light module with one light direction, which shines downward, is mounted 30 cm above floor height. The path can be illuminated by using several light modules.

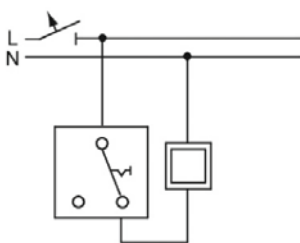

Information

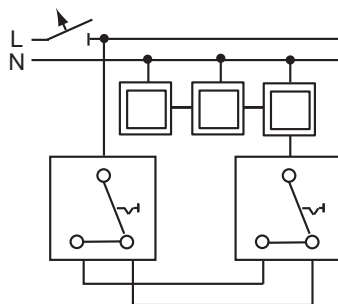

Pictograms can be inserted for orientation. This offers orientation twice: on the one hand, one is informed, and, on the other hand, basic illumination is available at night.
